

Recommendations

- Add a clear professional summary aligned to Senior AI Engineer responsibilities
- List concrete tools such as Python, PyTorch, TensorFlow, SQL, Docker, Kubernetes, and cloud AI services
- Show measurable project outcomes including latency, accuracy, cost, or revenue impact
- Include architecture, deployment, MLOps, and monitoring experience in bullet points
- Add leadership evidence such as mentoring, technical ownership, or cross-functional delivery
- Publish 2-3 AI engineering case studies on GitHub or a portfolio site

Senior AI Engineer | United Kingdom

Professional targeting Senior AI Engineer role in the United Kingdom market.

KEYWORD OPTIMIZATION

Senior AI Engineer

REQUIRED TO LAND THIS ROLE

REQUIRED SKILLS

13 items

Python for production ML systems

Technical

High

Machine learning system design and MLOps

Technical

High

Deep learning frameworks (PyTorch/TensorFlow)

Technical

High

Cloud AI engineering on AWS, Azure, or GCP

Technical

High

Data engineering for AI pipelines

Technical

High

Containerisation and orchestration with Docker and Kubernetes

Technical

Medium

Experiment tracking and model observability

Technical

Medium

Technical leadership and mentoring

Soft

High

Stakeholder communication for AI delivery

Soft

High

Cross-functional collaboration with product, data, and engineering teams

Soft

Medium

Risk communication and decision-making under uncertainty

Soft

Medium

UK AI governance and data protection awareness

Domain

High

Commercial application of AI in regulated and enterprise settings

Domain

High

REQUIRED AI SKILLS

10 items

- Supervised and unsupervised learning fundamentals

Foundational

High

- Deep learning for NLP and multimodal systems

Foundational

High

- LLM prompt engineering and evaluation

Applied

High

- Retrieval-Augmented Generation (RAG)

Applied

High

- Vector databases and semantic search

Applied

High

- Model fine-tuning and parameter-efficient adaptation

Applied

Medium

- AI platform engineering with Azure OpenAI, AWS Bedrock, or Vertex AI

Platform

High

- Hugging Face ecosystem

Platform

Medium

- Responsible AI and model governance

Governance

High

- LLMOps and AI observability

Governance

High

REQUIRED COMPETENCIES

6 items

- Evidence of owning AI solutions from problem framing to production impact

3-6 months

High

- Ability to set technical direction for a team and make architecture trade-off decisions

3-6 months

High

- Executive-level communication of AI value, risk, and delivery timelines

3-6 months

High

- Structured prioritisation across experimentation, reliability, and business deadlines

3-6 months

High

- Governance mindset for privacy, security, and model risk in enterprise environments

3-6 months

High

- Mentoring and code review discipline expected at senior level

3-6 months

High

REQUIRED CERTIFICATIONS

3 items

- Microsoft Certified: Azure AI Engineer Associate

6-12 months

High

• **AWS Certified Machine Learning - Specialty**

AWS ML Specialty

High

• **Google Cloud Professional Machine Learning Engineer**

Google Cloud

High
